Product Data

Culture chamber with 1, 2, 4, 8 or 16 compartments fixed on a 26 x 76 mm microscope slide, equipped with a covering lid. **Sterilised by gamma irradiation.** Principle: the culture develops in the compartments. Then it is just a case of removing the chamber from the slide and possibly putting a coverslip over it. The frosted rim of the slide is designed for labelling. The chamber is fixed to the slide via a silicone joint that just has to be taken off to remove the chamber.

Two surface types:

- Permanox plastic, promotes cell attachment, transparent, no auto-fluorescence, acetone-resistant
- Non-fluorescent glass
